Sfil (ggccattatggcc); Site 2: Sfil (ggccgctcggcc); Library is oligo-dT primed and directionally cloned. cDNA was prepared from a glandular pool of tissues from thyoid, parathyroid, adrenal, cortex and pineal gland. 5' and 3' adaptors were used in cloning as follows: 5' adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence: 5'-CATGGCCATTATGGCC-3' and 3' adaptor sequence: 5'-ATTCTAGAGGCGGGCGCGCATG-GT(30) BN-3' (where B = A, C, or G and N = A, C, G, or T). Average insert size 1.38 kb (range 0.60-3.5 kb): 15/15 colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clonech Laboratories (Palo Alto, CA). Note: this is a NIH_MGC Library."

NCI CGAP DHI is a normalized cDNA library containing the following tissue(s): VS-8 Cell line from Metastatic Chondrosarcoma in Lung: The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with and cloned directionally into pT713-pac

REFERENCE

```
vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGATCATTGC.
                                                                                                                                                                                               ó

NCI CGAP DH0 is a CNNA library containing the following tissue(s): VS-8 Cell line from Metastatic Chondrosarcoma in Lung. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an Ecok I adaptor, digested with Not I, and cloned directionally into pT713-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            632 bp mRNA linear EST 17-JUN-2002 UI-H-DH0-aum-m-09-0-UI.s1 NCI CGAP_DH0 Homo sapiens cDNA clone DMAGE:5871536 3', mRNA sequence.

NCI_CGAP DH0 is a cDNA library containing the following tissue(s): Vos 8 cell line from Metastatic chondrosarcoma in Lung. The library was constructed according to Bonaldo, lemnon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor digested with Not I, and cloned directionally into pT773-Pac vector. The oligonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site. Duble stranded cDNA contains is the contain the contains a library tag sequence that is located between the Not I site...

NCI_CGAP FTI is a normalized colbr library constructed from a pool of 81 RNA samples from Alveolar Macrophages
challenged with different treatments. The library was normalized according to Bonaldo, Lemnon and Soares, Genome Research, 6:791-806, 1996 First strand cDNA Synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The tissue was provided by Dr. Gary W. TAG TISSUE=Human Lung Aveolar Macrophage

//note="Organ: pooled; Vector: pT/73D-Pac (Pharmacia) with
a modified polylinker; Site 1: Not 1; Site 2: Eco R1;
Equal amounts of plasmid DNA from five normalized
libraries were mixed, and ss circles were made in vitro.
Following HAP purification, this DNA was used as tracer in
a subtractive hybridization reaction. The driver was
PCR-amplified CDNAs from pools of 5,000 clones made from
the same 5 libraries. The pools consisted of the following
libraries and clonefDs: Scares NBAFF pool 1:

modified polylinker; Site 1: EcoR I; Site 2: Not I; NCI CGAP DFO is a cDNA library containing the following tissue(s): Subchondral Bone. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-df primer containing a Not I site. Double stranded cDNA was ligated to an BCOR I adaptor, digested with Not I, and cloned directionally into pT773-pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT18 tail. The sequence tag for this library is GTTAAGCGTC.

UI-E-B11 is a subtracted cDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes,
AGAATCAAGA; lens, CGATTAGCGA; eye anterior segment,
1188 CAGCCCTACCCCAACCCTTCAACTACCAGAATCTGGGCCACCCCAGCAGTATTTTATTT 1247

with a modified polylinker; Plasmid DNA from the normalized library NCI CGAP Pr22 was prepared, and so circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCF-amplified CDNAs from a pool of 5,000 clones made from the same library (cloneIDs 985608-986759, 1101192-1101959, and 1217928-1220615).

ULI-B-Ed1 is a subtracted CDNA library constructed
according to Bonaldo, Lemnon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT713-Pac
vector. The oligomuclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
                                                                                                                                                                                                                                                                                                                                                                                                                                         EST 15-DEC-2003

/clone="UT-H-DF0-rangers" / clone="UT-H-DF0-rangers" / clone="UT-H-DF0-rangers" / dev_stage="Multu-H-DF0-rangers" / dev_stage="Multu-H-DF0-rangers" / dev_stage="DH10B (Life Technologies)" / clone_lib="NCI CGAP_DF0": pr773-pac (Pharmacia) with a modified polylinker; Site 1: ECOR I; Site 2: Not I; NCI CGAP_DF0 is a cDNA library containing—the following tissue (s): Subchondral Bone. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I; and cloned directionally into pT773-pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT18 tail. The sequence tag for this library is GTTAAGCGTC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tumor Gene Index

/note="Vector: lambda psB; Site_1: BamHI; Site_2: EcoRI;
First strand cDRA was primed with an anchored
Xhol-oligo(dT) primer [5'GGAGGACTCGAGGGGCGCAGGAGGG(T)VN
3'; V=A,C,G; N=A,C,G,T] and then dG tailed. Second strand
was primed with a BamH1-dC primer
[5'AGGAGTCGGACCGCAATAATAATAATAAT(C) 3'].
Double-stranded cDNA was then digested with BamH1 and XhoI
and directionally cloned into the BamH1 and SalI sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN
of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T,
ItOh M, Nagaoka S, Sasakin, Okazaki Y, Muramatsu M,
Schneider C, Hayashizaki Y, High efficiency selection of full-length cDNA by improved bictinylated cap trapper.,

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.B. clones 260232-265223,

Email: cgapbs-remail.nih.gov
The sequence contained an oligo-dT track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. cDNA ibrary Preparation: M.B. / note="Organ: pooled; Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site 1: Not 1; Site 2: Ecc R1; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NBH119W, testis NHT, and B-cell libraries (fetal lung NBH119W, testis NHT, and B-cell NCI CGAP GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries The pools consisted of I.M. AGE: Clones 29480-302087, 682632-687239, 726408-728711, and 728996-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "
